

MY SUCCESS STORY

My MRI showed that my severe knee pain was being caused by a torn meniscus and I despaired of being able to take my long planned post-retirement trip to India — which entailed 4-5 miles of daily walking and climbing. After several weeks of PT with Ray, however, I was so significantly improved, that not only was my trip a major success — with the occasional ibuprofen — but I am no longer counting on scheduling surgery in the near future!
